Summary

I am a Fullstack Developer with hands on experience building roubust and scalable fullstack application. I specialize in Javascript Technologies like React, Next, Node and MongoDB while being comfortable working with REST APIs. I have built authentication system using JWT (JSON Web Token) and Firebase all on the backend. I have also worked with Redis and use ChatGPT as an assistance for debugging.

Experience

ShonenStream

Fullstack Developer

Remote

🔗 <https://github.com/Karl-Xavier/Shonenstream-Remake>

A full-stack web application designed for streaming anime, built with NextJS, Node.js, Express, Redis and MongoDB. It includes features such as dynamic content fetching, user authentication, video streaming with custom backend proxy for .m3u8 files, and a user comment system. The platform also supports user interaction through bookmarking and personalized comment sections. The application is optimized for mobile and desktop users
